### **Lesson 7**

Managing text strings

Università  
Bocconi  
MILANO

# Objectives of the lesson

Understand the logics and the use of text functions

# Our first case

In the **Text functions** worksheet we have three sample text strings to use for an overview of text functions. We need to:

- Create text strings according to the requests in the worksheet, using text functions

# Our second case

In the **Subscribers** worksheet we have a sample of customers who have subscribed to online services provided by a company. We need to create in a new column named **Subscriber ID**, a new ID to uniquely identify each subscriber, as follows:

- the first two letters of the surname (all uppercase)
- the last four digits of the ID
- the gender (lowercase)
- the first three letters of the Country (all uppercase)
- a dash (-)
- one of the following abbreviations:
  - YNG for those subscribers with less than 26 years of age
  - STN for those subscribers with an age between 26 and 60 years (both inclusive)
  - SEN for those subscribers older than 60 years

For instance, the subscriber Magalotti Edoardo, male, 48 years old, with ID 708343 and from Italy, will be identified with the code “MA8343mITA-STN”

# Our second case

In a new column named **Message**, create a custom thank you message to invite each subscriber to visit the company website. The default message should be the following:

Dear **<subscriber name>**, thank you for subscribing! For more information, please visit our website at [www.company.com/<site language>](http://www.company.com/<site language>)

Where:

- **<subscriber name>** should be replaced by the subscriber name
- **<site language>** should be “it” for subscribers from Italy and “en” for subscribers from all other countries

For instance, the subscriber Magalotti Edoardo should have the following custom message: “Dear Edoardo, thank you for subscribing! For more information, please visit our website at [www.company.com/it](http://www.company.com/it)”

# Our second case

In the **Winners** worksheet there's a list of subscribers that the company has decided to reward with a gift card. We need to:

- In a new column named **Cleaned name and surname**, clean the values of the Name and surname column and modify them so that only the first letter of both name and surname are capitalized
- Apply a format to the cells of the Subscriber ID column so that the values are automatically highlighted with a fill color of your choice when the name of the subscriber begins with letter "M" or with letter "A"

# Our second case

In a new column named **Message**, create a custom message to communicate to the subscriber the gift card value. The message should be the following:

Dear **<subscriber name>**, you have won a gift card worth **<value>** euros!

Where:

- **<subscriber name>** should be replaced by the subscriber name
- **<value>** should be replaced with the gift card value, calculated as follows:
  - if the subscription type is “Basic” or “Family” the gift card is worth 100 euros
  - if the subscription type is “VIP” the gift card is worth 200 euros
  - In all other cases the gift card is worth 150 euros

# Tools to learn with today's lecture

- Function RIGHT, LEFT, MID, CONCATENATE, UPPER, LOWER, PROPER, LEN, SEARCH, TRIM
